Gap From Top Performing Group

The 2024 STAAR performance data reveals a district wide **average score** of **48.72**, reflecting a slight **decrease of 0.57** points from the previous year.

The **Asian student** group leads performance with **highest average score**, while **American Indian student** demonstrated highest year-over-year improvement.

However, significant equity gap persist with the **Special Ed (Current)** group showing a **43.48 gap** compared to the top performing group.

These findings highlight both progress in targeted support initiatives and the need for **continued investment** in

White	56.92	65.22	56.56	75.63	57.36	62.27	89.54	50.69	47.00	77.08

This view breaks down STAAR performance by **Student Group and Subject**, helping identify where disparities are most pronounced.

The **Asian** and **White** student groups show consistent **high performance** across subject, while **Special Ed (current)** and **EB/BL** groups **underperform** across the board.

Subject wise, **Reading, Math,** and **Science** appear to be the **most challenging** for multiple groups with scores often below the district average.

These Patterns emphasize the need for **subject-specific intervention strategies** to promote equitable academic outcomes.

Year Over Year Score Change Analysis by Student Group, Subject, Grade, and Performance

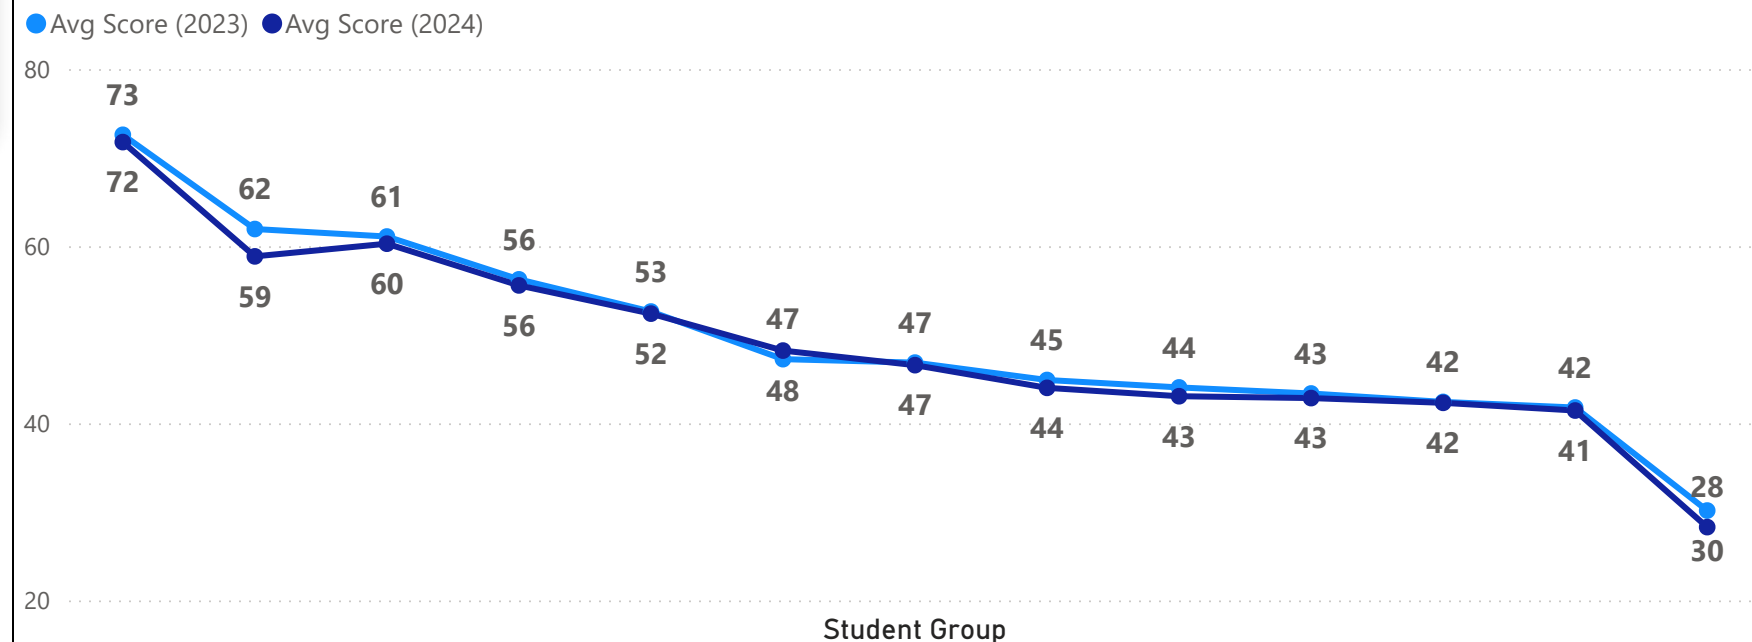

This view compares STAAR performance across **Student Group** from **2023 to 2024**, highlighting both **absolute** performance and **growth** trends.

While groups like **Asian** and **White** students continue to lead in overall scores **notable improvements** were observed in **Pacific Islander** and **Special Ed (former)** groups.

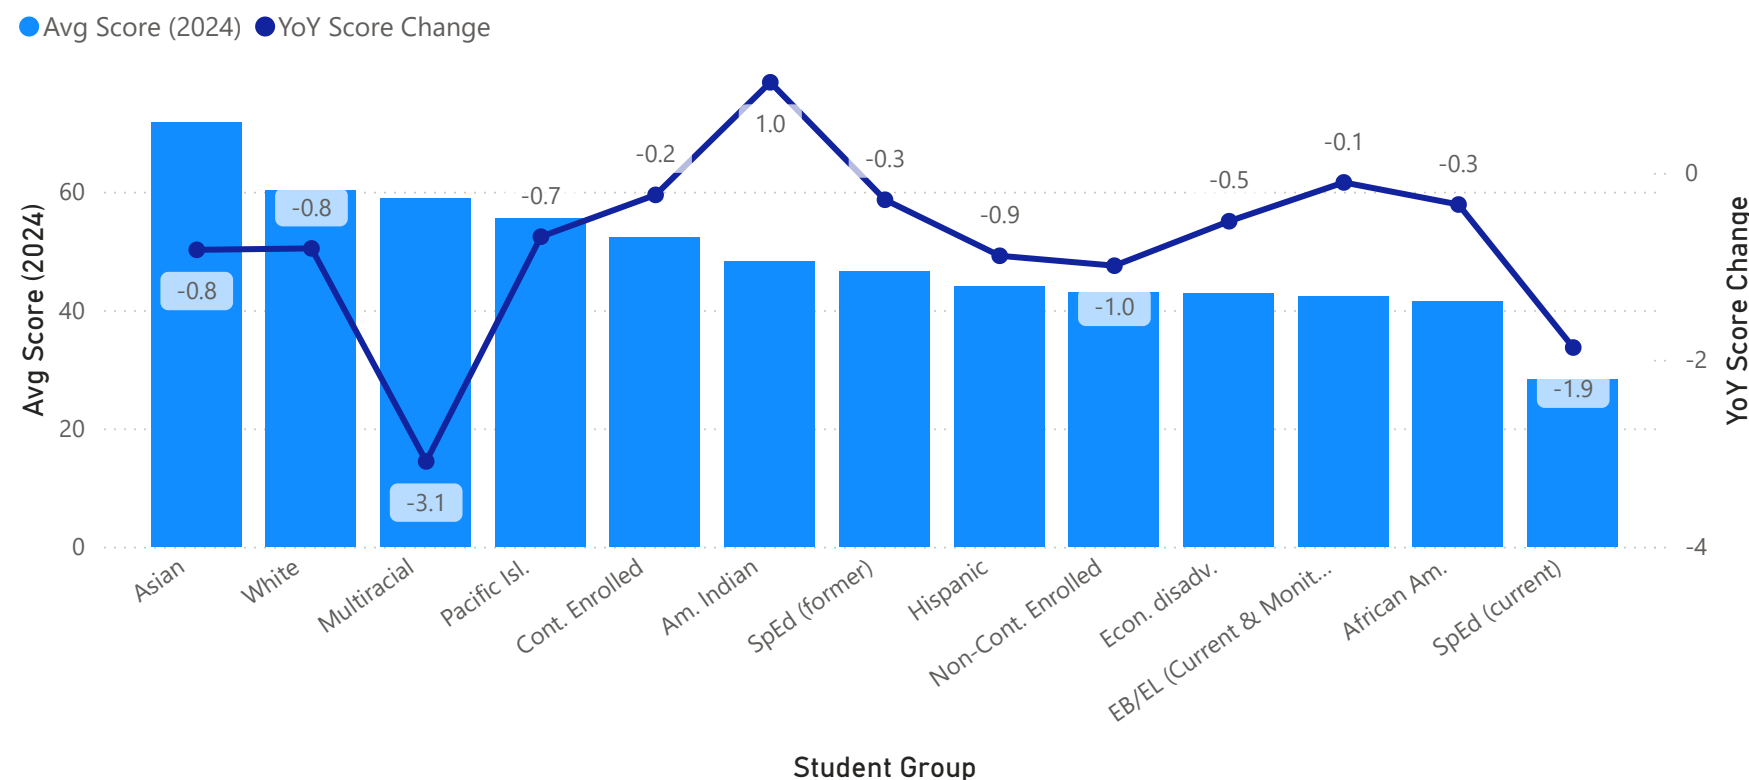

In contrast, groups such as **Multiracial** and **Special Ed (Current)** experienced **declines**, indicating potential gaps in support or instruction.

These Patterns emphasize the importance of **tracking performance over time** and targeting intervention strategies where declines are most visible.

Performance Approaches Masters Meets

This view **highlights subject performance across grade levels**, helping educators identify trends and gaps in learning progression.

Math, Science, and Reading show **declining** trends in grades **7-9**, while **English I & II perform consistently across levels**.

The matrix view reveals that **Grade 6 underperforms** across multiple subject areas.

These Patterns emphasize the importance of **early and subject-specific intervention strategies**, especially in core content areas critical to graduation pathways.

This view compares STAAR performance across **districts** and **counties** near **Houston, TX**.

Clear Creek ISD and **Cypress Fairbanks ISD outperform** their regional peers, while **Spring Branch ISD** lags **behind** the **statewide average**.

At the County level, **Galveston County leads** with an average of STAAR score of **55.68%** compared to **46.28% in Harris County**.

These geographical trends highlight the **need for county-level equity investments and district level instructional support strategies**.

Avg Score 2023 and 2024 by Student Group

This view explores student distribution **across** STAAR performance categories - **Approaches, Meets, and Masters**.

While most students fall within the **Approaches level (72.9%)**, only **21.3% reach the Masters level**, indicating a need for depth of understanding and rigor.

The trend line reveals grade-level shifts in performance categories, with some groups showing **upward mobility** into **Meets and Masters** over time.

These breakdowns allows educators to **target interventions** by mastery depth **rather than averages alone**.
